Hi Dianne,

Scott forwarded me your email and pictures on the curly-leaf pondweed you found in Eagle Lake. I was sorry to learn of the new discovery. With it being a new discovery, I'm interested to hear more about what you've observed in the lake. Do you have a sense for how many plants are in front of your boathouse? Have you seen the curly-leaf pondweed in other locations of the lake? Is this the first year you've seen curly-leaf or do you think it's been in the lake for a while?

Sorry for the list of questions, but it'll help us get a sense for the distribution and density of the population.

Best,

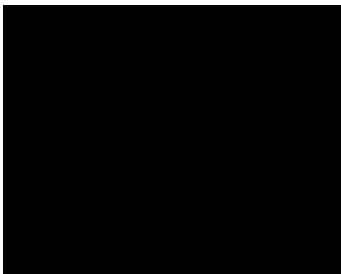

Erin

Hi Diane-

No need to send a specimen. Unfortunately, it is curly-leafed pondweed. I don't see the turion, an overwintering bud that feels kind of woody, but the rounded tips, slightly serrated edges, flattened stem, and the reddish mid vein are clear indications that it is curly leafed pondweed. It is a little surprising to see the plant so late in the year, since it often dies out in mid July, but we do occasionally see some late stragglers.

Sorry to be the bearer of bad news....(thought the pictures are terrific).

Scott

Hi Scott,

Here are some attached pictures of a new plant observed yesterday in front of our boathouse in about 15 feet of water. If you could help us with its identification we would be most grateful. My concern is that it may be Curly Leaf Pondweed. I can send a plant sample via the CSLAP cooler that is due to be shipped early next week, if that is a good venue to get it to you, or another person. Please advise how the plant should be prepared if it is desirable to have it sent, and if it should be sent somewhere other than to CSLAP. Thanks, we do appreciate your advisement on this matter.

Respectfully,
Dianne Tiedemann
