Dear Dianne,

I was very pleased to have met you and your friend at the Property Owners' picnic last Saturday. I hope that you were able to stay cool at the Lake!

As promised, I am enclosing copies of the correspondence I have had with various people about the algae problem. These copies start with the time that I began to get something constructive, as I see no point in boring you with the preliminaries. I am also enclosing a copy of the letter I sent to Miss Lodge, and all the other land owners I could identify, who should be interested.

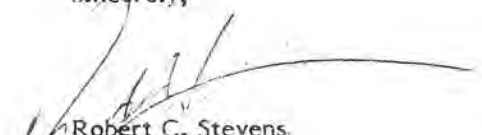

I would appreciate all the help I can get in pursuing this problem. In talking with Mr. Putman further, he also said he would take samples of the Lake for B. Coli examination, a problem we have had in August in some years. Due to the heat, it is possible that we could have it now! I did not want to mention that at the meeting, as I thought that any testing would bring this out without panicing the Members at this time.

If you do any further work or investigation on this, I would appreciate your letting me know, so that we can coordinate our efforts, rather than duplicating them.

My wife and I will be back at the lake about the 18th of August until about the 3th of September, and hope that you will drop in as you pass by.

Thanks again for your help.

Sincerely,

Robert C. Stevens
