Dear Dave,

Thank you for your letters of November 27th and December 12th.

I feel as you do that we should get a letter out to the members. As you know, I have already sent a copy of Frank's letter to all the people on the North Shore, and to Mr. Runge and Mr. Ruck, as those latter might take water out of the Lake. I do not know the names of the other Owners on the South side of the Lake, across the viaduct, so I cannot send them copies.

However, I feel very strongly that we should not send the letter until we can say in it that it is obvious from what we have learned that phosphorous pollution is the cause and therefore we have mounted a program to check everyone's septic system during the summer.

I received a very nice letter from Al Runge also thinking that all the Owners should be notified. But let's get some people trained to do the testing and start about the second week in July, after the summer people have been there a couple of weeks. As you know, Tom Higgenbotham said he would be glad to train them.

Sincerely,

Robert C. Stevens
