

CSLAP 2012 Lake Water Quality Summary: Eagle Lake

General Lake Information

Location	Town of Ticonderoga
County	Essex
Basin	Upper Hudson River
Size	170.9 hectares (422.1 acres)
Lake Origins	augmented by dam
Watershed Area	996.5 hectares (2,461.4 acres)
Retention Time	1.8 years
Mean Depth	5.4 meters
Sounding Depth	11.5 meters
Public Access?	DEC launch
Major Tributaries	Goosneck Pond Outlet
Lake Tributary To...	unnamed outlet to Pagagon Brook to Paradox Lake to Schroon River to Hudson River
WQ Classification	B (contact recreation = swimming)
Lake Outlet Latitude	43.872
Lake Outlet Longitude	-73.617
Sampling Years	2000-2012
2012 Samplers	Paul and Mary Lloyd Burroughs
Main Contact	Paul and Mary Lloyd Burroughs

Lake Map

Background

Eagle Lake is a 422 acre, class B lake found in the Town of Ticonderoga in Essex County, within the Eastern Adirondack region of New York State. Eagle Lake was first sampled as part of CSLAP in 2000.

It is one of nine CSLAP lakes among the more than 270 lakes found in Essex County, and one of 24 CSLAP lakes among the more than 470 lakes and ponds in the Upper Hudson River drainage basin.

Lake Uses

Eagle Lake is a Class B lake; this means that the best intended use for the lake is for contact recreation—swimming and bathing, non-contact recreation—boating and fishing, aquatic life, and aesthetics. The lake is used by lake residents and visitors (via a DEC launch site) for a variety of recreational purposes.

Eagle Lake is stocked annually with about 3,800 nine inch brown trout, and 1,500 seven inch brown trout. Fish species in the lake include black crappie, brown bullhead, brown trout, largemouth bass, northern pike, pickerel, rock bass, smallmouth bass, pumpkinseed sunfish, lake whitefish, and yellow perch.

General statewide fishing regulations are applicable in Eagle Lake. In addition, the open season on sunfish and yellow perch lasts all year, with no size or take limits. There is also a year-long open season on trout, with no size limits, but a daily take limit of five fish.

Historical Water Quality Data

CSLAP sampling was conducted on Eagle Lake each year from 2000 to 2012. The CSLAP reports for each of the past several years can be found on the NYSFOLA website at <http://nysfola.mylaketown.com>. The 2011 CSLAP report and scorecard for Eagle Lake can also be found on the NYSDEC web page at <http://www.dec.ny.gov/lands/77872.html>.

Eagle Lake was sampled by the NYSDEC in 1999 as part of the Lake Classification and Inventory (LCI) survey, the Division of Water ambient lake monitoring program. It was also sampled by the New York State Conservation Department (the predecessor to the NYSDEC) as part of the Biological Survey of the Upper Hudson River basin in 1932. The LCI results from 1999 indicate that water transparency was slightly higher than in the contemporary CSLAP study of the lake, although nutrient and algae levels were comparable. These indicators suggest that water quality conditions from 1999 were similar to those measured in recent years through CSLAP.

The Biological Survey was intended to evaluate water quality conditions as they relate to fisheries management, so much of the information collected cannot be easily compared to the CSLAP dataset. The lake was described as follows:

“Eagle Lake comprises an area of 409 acres with little shallow water and few weed beds. The rocky bottom slopes rapidly away from the shores. Eighty to ninety percent of the lake is over twenty feet deep and temperature and oxygen relationships are satisfactory for fish everywhere..... few weed beds... This is a rather narrow lake with rocky shores. The weed areas

are limited mostly to a long narrow bay which includes the part of the lake west of the highway crossing. This bay gradually merges with Paragon Creek. This whole area, for a distance of over one mile, supports a very luxuriant growth of plants”.

Lake Association and Management History

Eagle Lake is served by the Eagle Lake Property Owners, Inc. Some of the activities conducted by the lake association include:

- Septic system inspection and dye testing (late 1990s)
- On-going education of lake residents (at annual meeting) discouraging feeding of waterfowl
- remove beaver dam and control of own water level
- plant control- plant monitoring, benthic mats, hand harvesting, mapping, grant writing, advocating and applying for aquatic herbicide control, signage to prevent or minimize new infestations
- adopt a highway, neighborhood watch

The Eagle Lake Association maintains a website at <http://www.eaglelake1.org/>.

Summary of 2012 CSLAP Sampling Results

Evaluation of 2012 Annual and Monthly Results Relative to 2006-2011

The summer (mid-June through mid-September) average readings are compared to historical averages for all CSLAP sampling seasons in the “Lake Condition Summary” table, and are compared to individual historical CSLAP sampling seasons in the “Long Term Data Plots –Eagle Lake” section in Appendix C.

Evaluation of Eutrophication Indicators

Total phosphorus readings were higher than normal in 2012, starting in mid summer, although this did not translate into changes in algae levels or water transparency, both of which were close to normal in 2012. None of these indicators has exhibited any clear long-term trends. Lake productivity decreases slightly during the typical summer, as manifested in decreasing nutrient levels and increasing water clarity. Although phosphorus readings increased during the summer of 2012, water clarity readings followed the same seasonal pattern observed in the typical sampling season. This suggests that the seasonal variability in phosphorus readings did not result in any other lake changes.

The lake continues to be characterized as *oligotrophic*, based on water clarity, chlorophyll *a* and total phosphorus readings, although phosphorus readings in 2012 were more typical of *mesotrophic* lakes. The trophic state indices (TSI) evaluation suggests that each of the trophic indicators are “internally consistent,” with readings for each of the trophic indicators within the expected range (notwithstanding the higher TP readings in 2012). Overall trophic conditions are summarized on the Lake Scorecard and Lake Condition Summary Table.

Evaluation of Potable Water Indicators

Algae levels are not high enough to render the lake susceptible to taste and odor compounds or elevated DBP (disinfection by product) compounds that could affect the potability of the water, and the lake is not classified for this use. Deepwater phosphorus and ammonia readings are low and similar to those measured at the lake surface. This suggests no impacts for any “unofficial”

deepwater potable intakes. Potable water conditions, at least as measurable through CSLAP, are summarized in the Lake Scorecard and Lake Condition Summary Table.

Evaluation of Limnological Indicators

NOx and calcium readings were lower than normal in 2012, but each of the other limnological indicators (ammonia, total nitrogen, pH, conductivity, and color) was close to normal in 2012. None of these indicators has exhibited a long-term trend. It is likely that the small changes in each of these indicators from year to year represent normal variability. Overall limnological conditions are summarized in the Lake Scorecard and Lake Condition Summary Table.

Evaluation of Biological Condition

Phytoplankton, zooplankton and macroinvertebrate data have not been collected through CSLAP at Eagle Lake. The fluoroprobe screening samples analyzed by SUNY ESF in 2012 found both low overall algae levels and low blue green algae levels, consistent with the other water quality data.

The Darrin Freshwater Institute (DFWI) and Allied Biological macrophyte surveys show very high diversity in the aquatic plant community, and identified 37 different aquatic plant species at the lake, including three protected plant species (*Megalodonta beckii*, water marigold, *Potamogeton alpinus*, northern pondweed, and *Isoetes lacustris*, lake quillwort) are found in the lake and one exotic plant species (*Myriophyllum spicatum*, Eurasian watermilfoil). The modified floristic quality index (FQI) indicates that the quality of the aquatic plant community is “excellent”, although the management of Eurasian watermilfoil continues to be a focus of the lake association.

The fish community is comprised of at least eleven fish species, two of which are coldwater species and three of which are coolwater fish species.

Biological conditions in the lake are summarized in the Lake Scorecard and Lake Condition Summary Table.

Evaluation of Lake Perception

Recreational assessments were slightly less favorable than normal in 2012, due to a slight increase in (reported) plant coverage at the end of the sampling season. However, overall aquatic plant coverage and water quality assessments were close to normal in 2012. None of these indicators of lake perception has exhibited a long-term trend. These indicators do not typically exhibit significant seasonal changes, and no seasonal variability was apparent in 2012 (except for the slight increase in plant coverage and corresponding drop in recreational assessments in early September). Overall lake perception is summarized on the Lake Scorecard and Lake Condition Summary Table.

Evaluation of Local Climate Change

Air temperatures were slightly higher than normal during the summer index period (mid June through mid September), but this did not result in a similar change in water temperatures. No long-term changes have been apparent in either indirect indicator of local climate change.

Evaluation of Algal Toxins

Algal toxin levels can vary significantly within blooms and from shoreline to lake, and the absence of toxins in a sample does not indicate safe swimming conditions. Phycocyanin readings have been below the levels indicating susceptibility for harmful algal blooms (HABs), consistent with the 2012 fluoroprobe screening results indicating low levels of blue green algae.

Microcystis readings have been well below the levels indicating impacts to safe swimming in the open water. No shoreline algal blooms have been reported.

Lake Condition Summary

Category	Indicator	Min	00-12 Avg	Max	2012 Avg	Classification	2012 Change?	Long-term Change?
Eutrophication Indicators	Water Clarity	4.50	6.31	8.20	6.29	Oligotrophic	Within Normal Range	No Change

	Shoreline FP Chl.a					No shoreline blooms sampled for FP	Not known	Not known
	Shoreline FP BG Chl.a					No shoreline blooms sampled for FP	Not known	Not known
	Shoreline Microcystis					No shoreline bloom MC-LR data	Not known	Not known
	Shoreline Anatoxin a					No shoreline bloom anatoxin data	Not known	Not known

Evaluation of Lake Condition Impacts to Lake Uses

Eagle Lake is presently among the lakes listed on the 2007 Upper Hudson River basin Priority Waterbody List (PWL), with recreation listed as *stressed* due to excessive weeds. The PWL listing for the lake is in Appendix C.

Potable Water (Drinking Water)

The CSLAP dataset at Eagle Lake, including water chemistry data, physical measurements, and volunteer samplers' perception data, is inadequate to evaluate the use of the lake for potable water, and the lake is not classified for this use. The limited CSLAP data suggest no impacts for any "unofficial" use of the lake for this purpose, although this use is not authorized.

Contact Recreation (Swimming)

The CSLAP dataset at Eagle Lake, including water chemistry data, physical measurements, and volunteer samplers' perception data, suggests that swimming and contact recreation should be fully supported as related to water quality conditions, but may be *threatened* by excessive weeds. Additional information about bacteria levels is needed to determine if pathogens impact swimming.

Non-Contact Recreation (Boating and Fishing)

The CSLAP dataset on Eagle Lake, including water chemistry data, physical measurements, and volunteer samplers' perception data, suggest that non-contact recreation may be *stressed* by excessive weeds, particularly Eurasian watermilfoil.

Aquatic Life

The CSLAP dataset on Eagle Lake, including water chemistry data and physical measurements, suggest that aquatic life could be *threatened* by Eurasian watermilfoil. Additional data are needed to evaluate the food and habitat conditions for aquatic organisms in the lake.

Aesthetics

The CSLAP dataset on Eagle Lake, including volunteer samplers' perception data, suggest that aesthetics should be fully supported.

Fish Consumption

Fish consumption advisories are not posted for Eagle Lake.

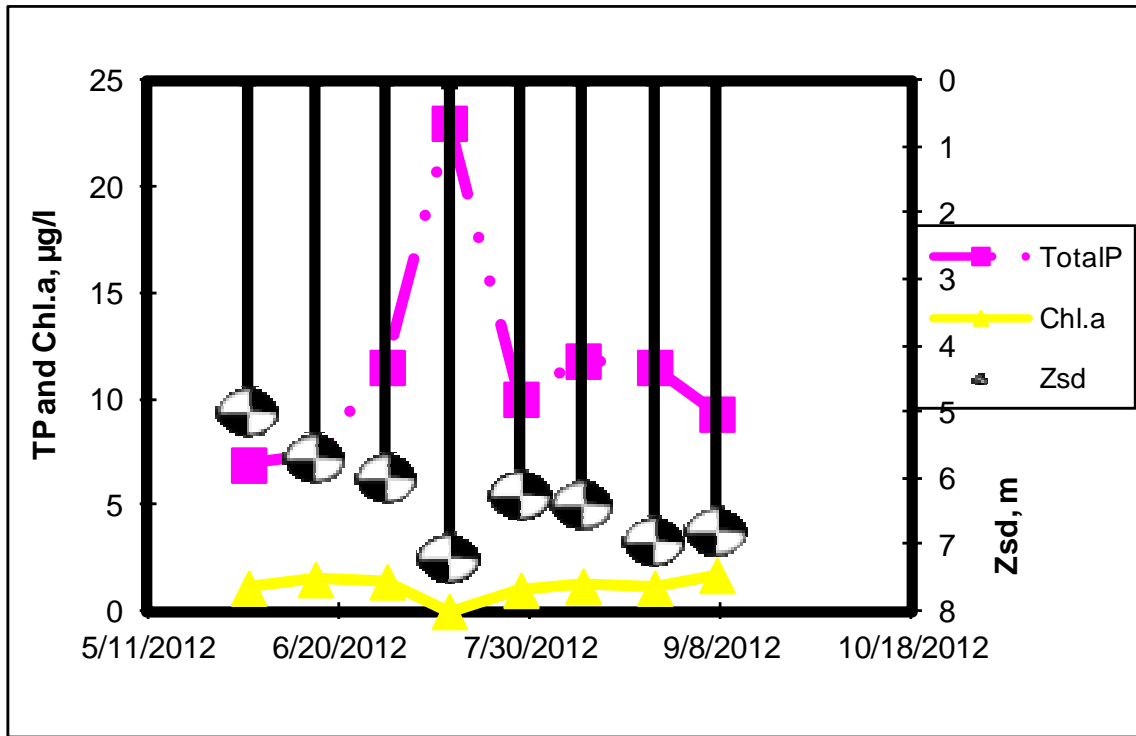

Additional Comments and Recommendations

Additional (more extensive) water quality evaluations may be conducted with the CSLAP dataset in the event of an herbicide treatment in the lake, to assure that no water quality impacts occur (or are attributable to the rapid milfoil dieoff anticipated as a result of a treatment). Lake residents are advised to report any shoreline algae blooms.

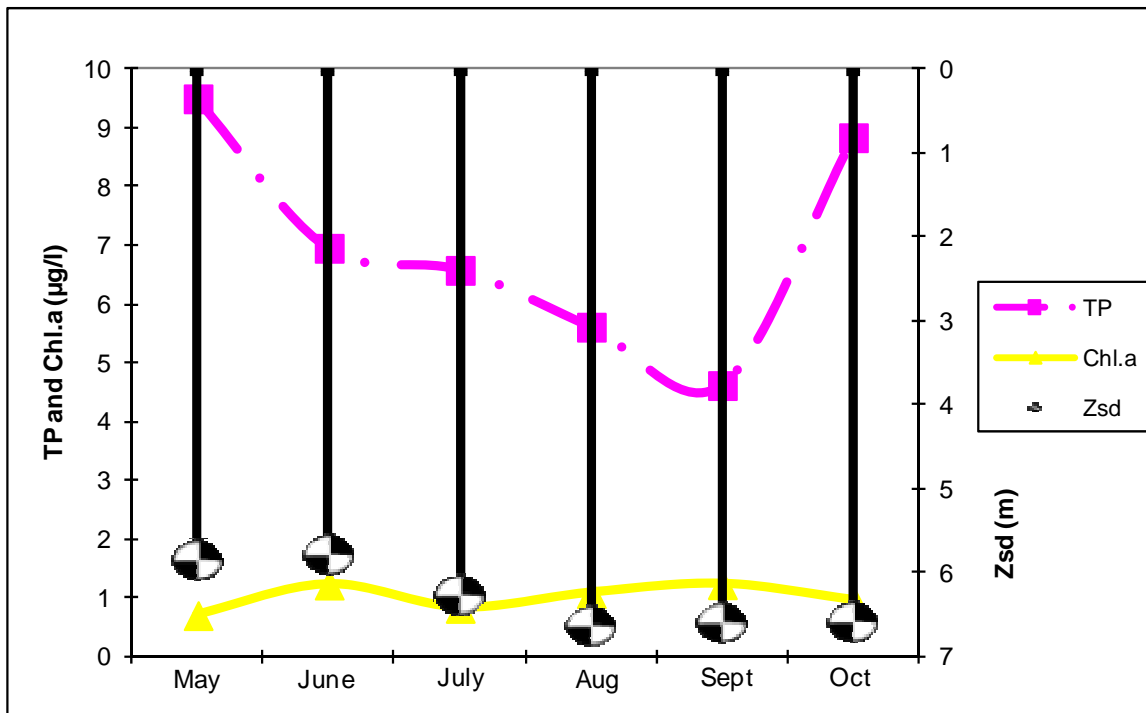

Aquatic Plant IDs-2012

None submitted for identification

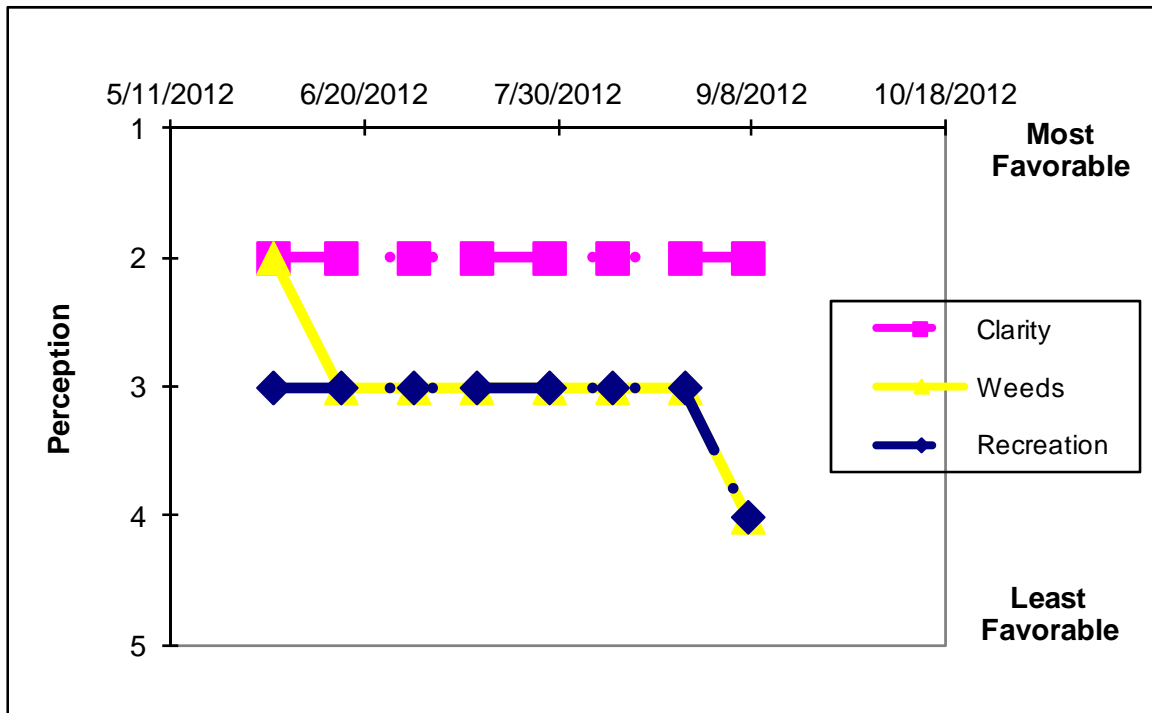

Time Series: Trophic Indicators, 2012

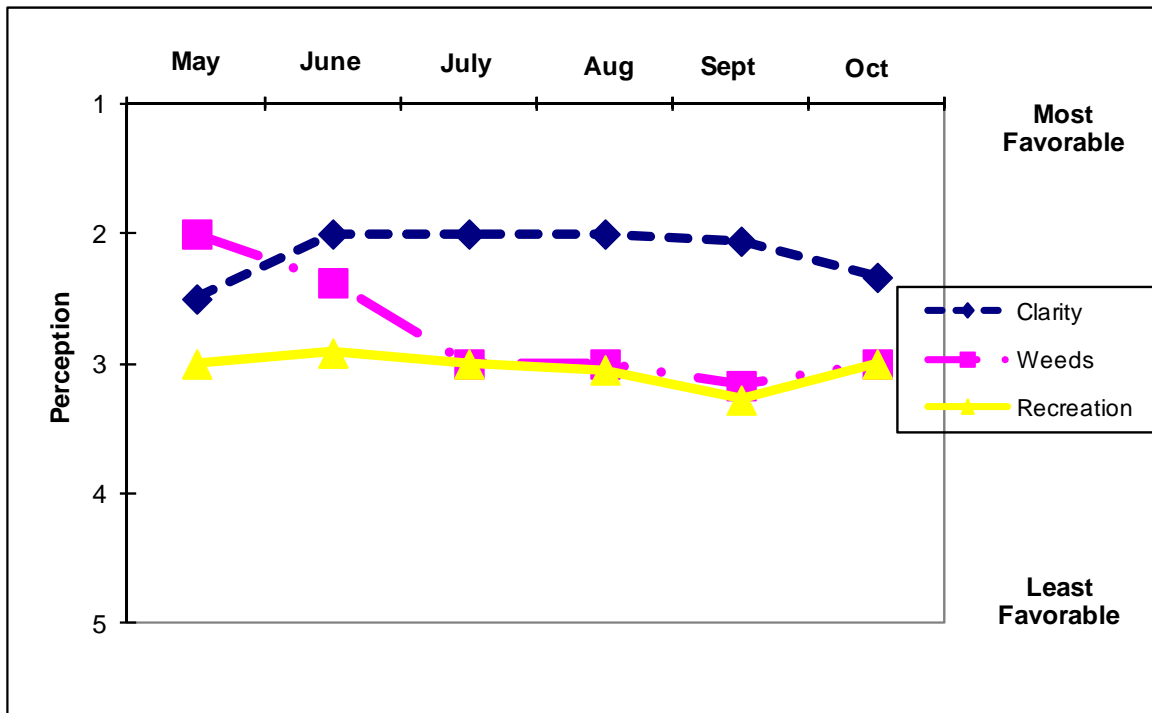

Time Series: Trophic Indicators, Typical Year (2000-2012)

Legend Information

<i>Indicator</i>	<i>Description</i>	<i>Detection Limit</i>	<i>Standard (S) / Criteria (C)</i>
General Information			
Lnum	lake number (unique to CSLAP)		
Lname	name of lake (as it appears in the Gazetteer of NYS Lakes)		
Date	sampling date		
Field Parameters			
Zbot	lake depth at sampling point, meters (m)		
Zsd	Secchi disk transparency or clarity	0.1m	1.2m (C)
Zsamp	water sample depth (m) (epi = epilimnion or surface; bot = bottom)	0.1m	none
Tair	air temperature (C)	-10C	none
TH20	water temperature (C)	-10C	none
Laboratory Parameters			
Tot.P	total phosphorus (mg/l)	0.003 mg/l	0.020 mg/l (C)
NOx	nitrate + nitrite (mg/l)	0.01 mg/l	10 mg/l NO3 (S), 2 mg/l NO2 (S)
NH4	total ammonia (mg/l)	0.01 mg/l	2 mg/l NH4 (S)
TN	total nitrogen (mg/l)	0.01 mg/l	none
TN/TP	nitrogen to phosphorus (molar) ratio, = (TKN + NOx)*2.2/TP		none
TCOLOR	true (filtered) color (ptu, platinum color units)	1 ptu	none
pH	powers of hydrogen (S.U., standard pH units)	0.1 S.U.	6.5, 8.5 S.U. (S)
Cond25	specific conductance, corrected to 25C (umho/cm)	1 umho/cm	none
Ca	calcium (mg/l)	1 mg/l	none
Chl.a	chlorophyll a (ug/l)	0.01 ug/l	none
Fe	iron (mg/l)	0.1 mg/l	1.0 mg/l (S)
Mn	manganese (mg/l)	0.01 mg/l	0.3 mg/l (S)
As	arsenic (ug/l)	1 ug/l	10 ug/l (S)
AQ-PC	Phycocyanin (aquafior) (unitless)	1 unit	none
AQ-Chl	Chlorophyll a (aquafior) (ug/l)	1 ug/l	none
MC-LR	Microcystis-LR (ug/l)	0.01 ug/l	1 ug/l potable (C) 20 ug/l swimming (C)
Ana	Anatoxin-a (ug/l)	variable	none
Cyl	Cylindrospermopsin (ug/l)	0.1 ug/l	none
FP-Chl, FP-BG	Fluoroprobe total chlorophyll, fluoroprobe blue-green chlorophyll (ug/l)	0.1 ug/l	none
Lake Assessment			
QA	water quality assessment; 1 = crystal clear, 2 = not quite crystal clear, 3 = definite algae greenness, 4 = high algae levels, 5 = severely high algae levels		
QB	aquatic plant assessment; 1 = no plants visible, 2 = plants below surface, 3 = plants at surface, 4 = plants dense at surface, 5 = surface plant coverage		
QC	recreational assessment; 1 = could not be nicer, 2 = excellent, 3 = slightly impaired, 4 = substantially impaired, 5 = lake not usable		
QD	reasons for recreational assessment; 1 = poor water clarity, 2 = excessive weeds, 3 = too much algae, 4 = lake looks bad, 5 = poor weather, 6 = litter/surface debris, 7 = too many lake users, 8 = other		
QF, QG	Health and safety issues today (QF) and past week (QG); 0 = none, 1 = taste/odor, 2 = GI illness humans/animals, 3 = swimmers itch, 4 = algae blooms, 5 = dead fish, 6 = unusual animals, 7 = other		
HAB form	HAB evaluation; A = spilled paint, B = pea soup, C = streaks, D = green dots, E = bubbling scum, F = green/brown tint, G = duckweed, H = other, I = no bloom

Appendix C- Priority Waterbody Listing for Eagle Lake

Eagle Lake (1104-0235)

Need Verific

Waterbody Location Information

Revised: 02/09/2007

Water Index No:	H-391..39-P432..P438	Drain Basin:	Upper Hudson River
Hydro Unit Code:	02020001/090	Str Class:	B
Waterbody Type:	Lake	Reg/County:	5/Essex Co. (16)
Waterbody Size:	422.3 Acres	Quad Map:	GRAPHITE (F-26-3)
Seg Description:	entire lake		

Water Quality Problem/Issue Information (CAPS indicate MAJOR Use Impacts/Pollutants/Sources)

Use(s) Impacted	Severity	Problem Documentation
Recreation	Stressed	Possible

Type of Pollutant(s)

Known: ---
Suspected: ALGAL/WEED GROWTH, PROBLEM SPECIES (Eurasian milfoil)
Possible: ---

Source(s) of Pollutant(s)

Known: ---
Suspected: HABITAT MODIFICATION
Possible: ---

Resolution/Management Information

Issue Resolvability:	1 (Needs Verification/Study (see STATUS))	
Verification Status:	1 (Waterbody Nominated, Problem Not Verified)	
Lead Agency/Office:	DOW/BWAM	Resolution Potential: Medium
TMDL/303d Status:	n/a ()	

Further Details

Recreational uses in Eagle Lake may be threatened by non-native invasive aquatic plant growth. Other water chemistry indicators suggest good water quality.

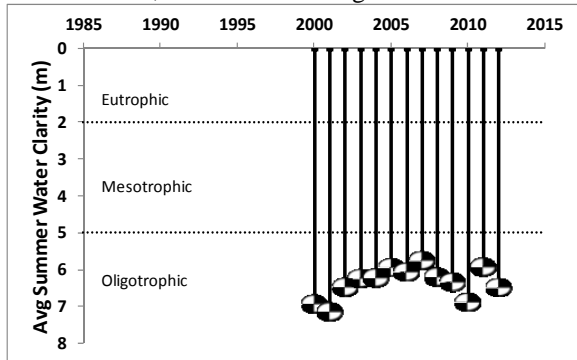

Eagle Lake has been sampled as part of the NYSDEC Citizen Statewide Lake Assessment Program (CSLAP) beginning in 2000 and continuing through 2005. An Interpretive Summary report of the findings of this sampling was published in 2006. These data indicate that the lake continues to be best characterized as oligotrophic, or highly unproductive. Phosphorus levels in the lake are well below criteria that would indicate impacted recreational uses and transparency measurements easily satisfy what is recommended for swimming beaches. (DEC/DOW, BWAM/CSLAP, May 2006)

Public perception of the lake and its uses is also evaluated as part of the CSLAP program. These assessment indicate recreational suitability of the lake to be somewhat impacted, primarily due to aquatic weed growth. Recreational conditions in the lake have been most often described as "slightly impacted" for most uses. The lake is regularly described as "not quite crystal clear." Such an assessment is atypical of lakes with similar water chemistry, but indicative of lakes with plant densities that grow to the lake surface. No aquatic plant surveys have been conducted through the CSLAP program, but Eurasian milfoil has been identified by other sources. (DEC/DOW, BWAM/CSLAP, May 2006)

Appendix D- Long Term Trends: Eagle Lake

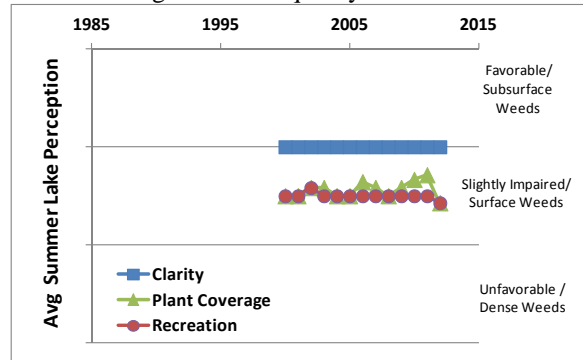

Long Term Trends: Water Clarity

- No trends apparent
- Most readings now typical of *oligotrophic* lakes, consistent with algae and TP levels

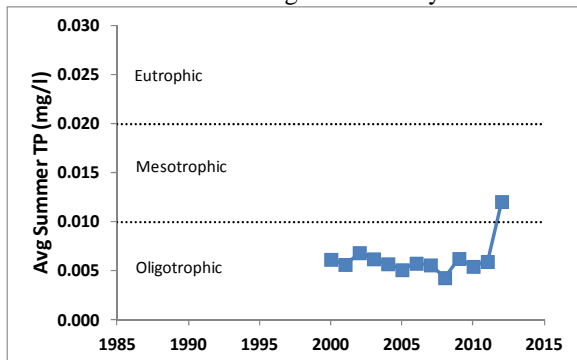

Long Term Trends: Lake Perception

- No trends apparent
- Recreational perception not closely linked to changes in water quality or weeds

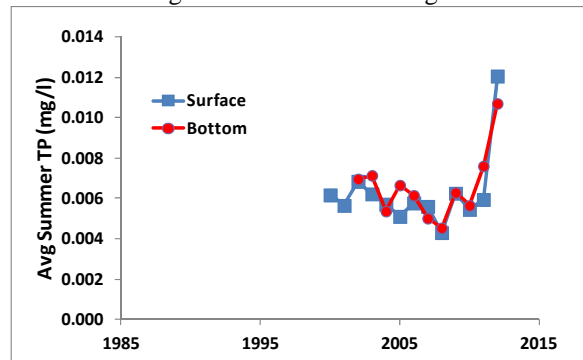

Long Term Trends: Phosphorus

- No trends apparent despite higher 2012 TP
- Most readings typical of *oligotrophic* lakes, consistent with algae and clarity

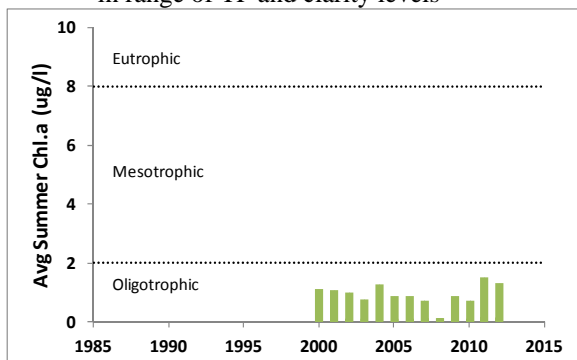

Long Term Trends: Bottom Phosphorus

- Similar surface and bottom TP
- Bottom TP may indicate little to no nutrient loading to surface levels during late summer

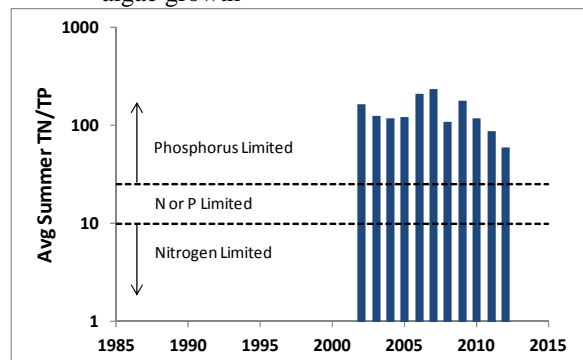

Long Term Trends: Chlorophyll a

- No trends apparent
- Most readings typical of *oligotrophic* lakes, in range of TP and clarity levels

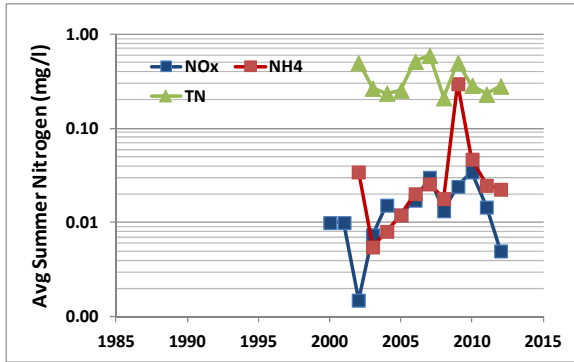

Long Term Trends: N:P Ratio

- No trends apparent
- Most readings indicate phosphorus limits algae growth

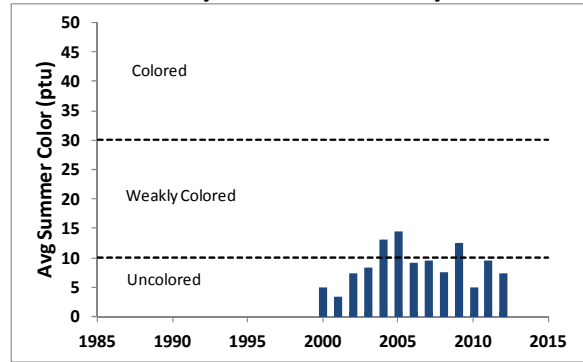

Long Term Trends: Nitrogen

- No trends apparent despite high variability
- Low NOx, ammonia and TN readings

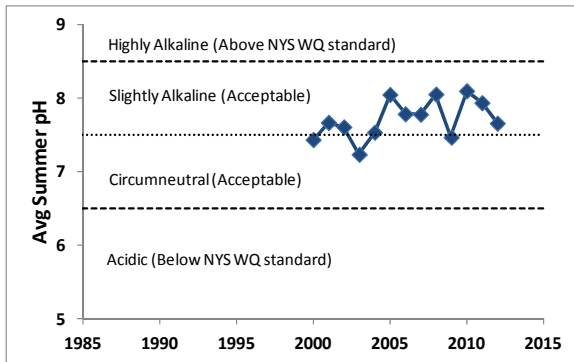

Long Term Trends: Color

- No trends apparent despite rise since 2002
- Most readings typical of *uncolored* lakes with likely little effect on clarity

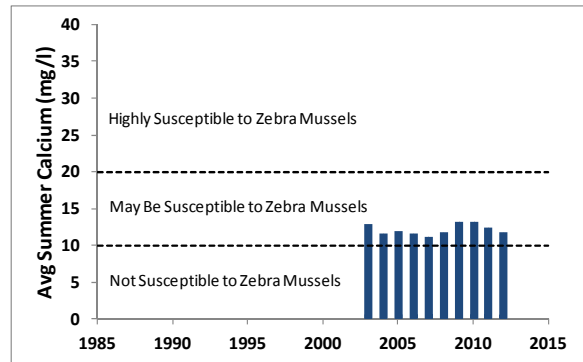

Long Term Trends: pH

- Slight increase not statistically significant
- Most readings typical of *slightly alkaline* lakes

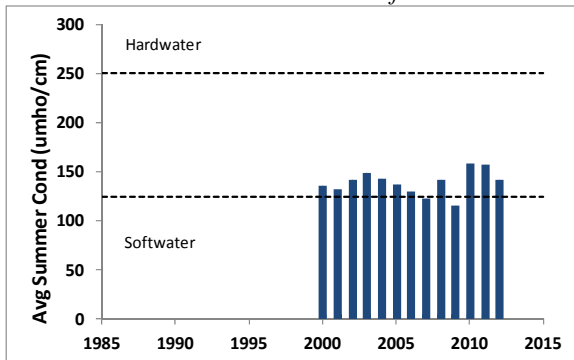

Long Term Trends: Calcium

- No trends apparent
- Most readings indicate low susceptibility to zebra mussels

Long Term Trends: Conductivity

- No trends apparent
- Most readings typical of lakes with *intermediate hardness to soft water*

Long Term Trends: Water Temperature

- No trends apparent
- Not known if bottom and surface temperatures similar
