-------------	-----------	---------------	------------	--------

28	Eagle Lake Properties Owners, Inc.	Eagle Lake Milfoil Eradication	5	\$30,000.00
----	------------------------------------	--------------------------------	---	-------------

This project called for the eradication of Eurasian watermilfoil through a combined program of benthic mats, hand pulling, and herbicides. Two thirds of the State ISEG funds were to be used for the herbicide application. The Regional participants on the Evaluation Team were adamant in their consensus that the applicant would *not* be successful in obtaining the permits necessary for the herbicide portion of the project. Eurasian watermilfoil is found around the perimeter of the lake and in an approximately one acre shoal in the center of the eastern portion of the lake. The herbicide treatment was proposed to address the milfoil on the shoal. If an herbicide permit could not be obtained, the success of the rest of the proposed project was jeopardized because the shoal population would serve as a reservoir for reinfesting the rest of the lake.
