DFWI Technical Report 2010-11

Background

For the twenty-third year, the Darrin Fresh Water Institute (DFWI) has continued the Aquatic Plant Identification Program. This program was initiated as a public service for the Lake George basin, in which individuals could bring specimens to DFWI for identification. In return, it assisted DFWI in locating new Eurasian watermilfoil and Curly-leaf Pondweed sites throughout the Lake George basin. DFWI now provides the opportunity for anyone in New York State to have plant specimens verified. This also enables us to maintain a list of locations of invasive aquatic plants such as Waterchestnut (*Trapa natans*), Curly-leaf Pondweed (*Potamogeton crispus*), Eurasian watermilfoil (*Myriophyllum spicatum*), and Fanwort (*Cabomba caroliniana*) in New York State. In 2004, we added Variable Milfoil (*Myriophyllum heterophyllum*), European Frogbit (*Hydrocharis morsus-ranae*) and Parrotfeather (*Myriophyllum aquaticum*) to our tabulated lists of exotic aquatic plant species in New York State. In 2005, we added an exotic macroalga, Starry Stonewort (*Nitellopsis obtusa*) and in 2006, we added Brazilian Elodea (*Egeria densa*). In 2008, we added Hydrilla (*Hydrilla verticillatum*).

Results

During 2010, seventeen specimens were received and identified (Table 1). One of the specimens was Brittle Naiad (*Najas minor*), a native species which appears to extending its range northward. Specimens of Eurasian watermilfoil, Waterchestnut and Curly-leaf pondweed were also received. At the conclusion of 2010, 353 lakes and rivers in 54 counties had confirmed populations of Eurasian watermilfoil, 180 lakes and rivers systems in 49 counties had confirmed populations of Curly-leaf Pondweed and 36 lakes and rivers in 8 counties had Fanwort. Waterchestnut was found mainly in the Hudson and Mohawk Rivers systems; however, 65 lakes and 26 counties were reported. We report 12 lakes and river systems in 11 counties with confirmed populations of European Frogbit and 61 lakes in 14 counties had Variable Milfoil. Parrotfeather is currently reported for seven lakes in Nassau and Suffolk counties of New York State. First reported in New York State in 1981, Starry Stonewort was present mainly in Central New York, reported in bays peripheral to Lake Ontario, the St Lawrence River, and Oneida Lake in Oswego County, along with Chautauqua Lake, Lake Bonaparte, Cayuga Lake, Cazenovia Lake and Lake Moraine. Starry Stonewort is presently found in 15 lake and river systems in 14 counties. Brazilian elodea was first reported in 2006 in the Hudson Valley and on Long Island where it is currently found in 11 lakes and 4 counties. Like Brazilian elodea, Hydrilla was first reported in 2008 in the lower Hudson Valley and several locations on Long Island where it is found in 7 lakes and 3 counties.

The extension of this program has benefited regional lake associations and municipalities. We have identified samples from numerous area lakes other than Lake George. Most often, the specimens have not been exotic species, and therefore the concerns of lake residents have often been allayed. In the other instances, it has provided the impetus for concerted action on the part of the lake association.

As a part of this program, DFWI maintains an expanding list of sites we have verified to contain Eurasian watermilfoil (Table 2, Figure 1), Waterchestnut (Table 3, Figure 2), Curly-leaf Pondweed (Table 4, Figure 3), Fanwort (Table 5, Figure 4), Variable Milfoil (Table 6, Figure 5),

European Frogbit (Table 7, Figure 6), Parrotfeather (Table 8, Figure 7), Starry Stonewort (Table 9, Figure 8), Brazilian Elodea (Table 10, Figure 9) and Hydrilla (Table 11, Figure 10) in New York State. The list remains preliminary, since we currently lack verified sources for many lakes in which these species have been reported to occur. We will only add sites to the list for which an authoritative reference can be given, or for which we have a voucher specimen. We would appreciate receiving reports or other publications listing verified occurrences of these plants.

Table 1. Specimens Identified by the Aquatic Plant Identification Program in 2010.

SPECIES	SAMPLE NUMBER	DATE	LOCATION
<i>Eriocaulon aquaticum</i>	2010-01	05/21/2010	NW Bay, Lake George, Warren Co., NY
<i>Equisetum fluviatile</i>	2010-02	06/09/2010	Putnam, Lake George, Washington Co., NY
<i>Carex sp.</i>	2010-03	06/09/2010	Putnam, Lake George, Washington Co., NY
<i>Hydrocharis morsus-ranae</i>	2010-04	06/20/2010	Champlain Canal, Whitehall, Washington Co., NY
<i>Trapa natans</i>	2010-05	06/20/2010	Champlain Canal, Whitehall, Washington Co., NY
<i>Potamogeton crispus</i>	2010-06	06/20/2010	Champlain Canal, Whitehall, Washington Co., NY
<i>Myriophyllum spicatum</i>	2010-07	06/20/2010	Champlain Canal, Whitehall, Washington Co., NY
<i>Hydrocharis morsus-ranae</i>	2010-08	06/20/2010	Lake Champlain, Whitehall, Washington Co., NY
<i>Trapa natans</i>	2010-09	06/20/2010	Lake Champlain, Whitehall, Washington Co., NY
<i>Potamogeton crispus</i>	2010-10	06/20/2010	Lake Champlain, Whitehall, Washington Co., NY
<i>Fontinalis sp.</i>	2010-11	07/14/2010	Ballston Lake, Ballston, Saratoga Co., NY
<i>Myriophyllum spicatum</i>	2010-12	07/14/2010	NW Bay, Lake George, Warren Co., NY
<i>Brasenia schreberi</i>	2010-13	08/02/2010	Friends Lake, Chestertown, Warren Co., NY
<i>Nymphoides cordatum</i>	2010-14	08/02/2010	Friends Lake, Chestertown, Warren Co., NY
<i>Najas minor</i>	2010-15	09/05/2010	Warden, Illinois
<i>Najas flexilis</i>	2010-16	09/22/2010	Chateaugay Lake, Chateaugay, Clinton Co., NY
<i>Megalodonta beckii</i>	2010-17	12/10/2010	Paradox Lake, Essex County, NY

The Aquatic Plant Identification Program of Rensselaer's Darrin Fresh Water Institute will continue to be offered as a public service during 2011. In order to have samples identified, bring or send them to the DFWI at either the Troy campus or Bolton Landing facility. For more information, see the notice provided as Appendix A of this report.

APPENDIX A

AQUATIC PLANT IDENTIFICATION PROGRAM ANNOUNCEMENT

Darrin Fresh Water Institute (DFWI) has an ongoing program of identifying new sites with Eurasian watermilfoil both in Lake George, and in regional lakes. If you have a plant that you think may be Eurasian watermilfoil, we will gladly identify it for you free of charge.

To have plants identified, send or bring at least three intact plants to the DFWI laboratory facility in Bolton Landing on Lakeshore Drive (Route 9N) or to our RPI campus office (Materials Research Center 201). The plants should be in a plastic bag or container with water. In addition, we would like the following information: name of collector, lake name, site of collection, depth at which the plant was growing, date of collection, the name and phone number of a person to contact with the results.

Plants for identification should be directed to Lawrence Eichler (eichll@rpi.edu). For more information, contact the DFWI site in Bolton Landing (518) 644-3541 or in Troy at (518) 276-8430.
