Hello all,

After flirting with icing over and then breaking up due to strong winds for the past week to 10 days, it looks like the lake may be frozen over on a more permanent bases. For those not at the lake to witness this spectacular sight I'm including a few pictures captured by our public cameras and a couple from a private camera located close to the water on the north shore.

When I monitor the cameras for operation and posting to the Eagle Lake webpage for time lapse images it allows me to see the beauty of the lake and its daily changes, it also reminds me to reach out and say thanks to those in the background that make the whole thing possible.

if you haven't been to, or have forgotten the link to the time lapse images it here

Wishing everybody a safe, warm, and enjoyable holiday season

Rolf

From 12-16-2019

to 12-18-2019 the difference a day or 2 can make
