Subject: Carrying Capacity of waterbodies followup

Keith,
There was no followup study nor report on the carrying capacity of waterbodies within the Adirondack Park due to funding limitations. Recently, the APA staff and NYSDEC staff have taken up the matter again and are slowly developing a plan to move forward. There is no established deadline at this time. Can I answer any questions for you?

Keith —

I can't help directly, but, again, I blind copied this reply to the past coordinator, an emeritus professor. I hope he will respond.

You might also try approaching another lakes / fresh water / limnology expert directly by scanning a departmental faculty directory —perhaps <https://www.esf.edu/EFB/directory/> or <https://www.esf.edu/environmentalscience/directory/> .

Good luck.

Paul

Paul,

Thanks for the document,
Im also looking for anything else that followed this about lake carrying capacity. in the article you sent, on page 70 it mentions next phases, and phase 2, monitoring. (see below)

<image002.gif>

Is there a document that I can get for phase 2 or any other documents about additional phases of recreational impacts or carrying capacity of water bodies?

Thanks

Keith

Keith —

The PDF is attached. The NYWild site has been retired, but I am sending a BCC to the past coordinator so he knows of your interest.

If I can assist further, let me know.

Hi,

Im trying to access the following document:

Adirondack Park Forest Preserve

Carrying Capacity of Water Bodies Study: Phase I – Selecting Indicators for Monitoring
Recreational Impacts

Thru the SUNY ESF website.

but the link: (<http://www.esf.edu/nywild/publications/docs/carrying-capacity.pdf>).

no longer works, can you point me to a good link or send me a copy of the .pdf?

Thanks much,

Keith
