Product Overview

ProcellaCOR treats the weeds that keep coming back using a new mechanism and a new active herbicide for fast and long-lasting spot treatment. ProcellaCOR's active ingredient provides long-term control for hydrilla, milfoil, Your Technical Specialist. Created floating heart, and other tough to control aquatic weeds. So you can use less material and get longer control.

If you're tired of treating and re-treating with limited results, learn more about ProcellaCOR today and get your water back on the right track. Finally.

Stewarding Our Most Precious Resource: Water

Every water body has at least one nuisance weed that keeps coming back year after year. And that means applying chemicals to control it year after year. Not with ProcellaCOR. This unique formula requires 40x-100x less active ingredient and achieves significantly longer control. With a Reduced Risk classification from the EPA, it is designed to reduce risk to our health, non-target plants, and our water supply.

Only PRO Certified ProcellaCOR Specialists, highly trained aquatic management professionals, can provide invasive weed management with ProcellaCOR. Once a specialist applies ProcellaCOR near the weeds you've been dealing with, say goodbye! Those weeds won't be around much longer to clog your boat propeller, spoil your view, make it unpleasant to swim or fish, with longer lasting results.

No one wants repeated applications with the same average results. That's why SePRO has been hard at work creating a formula that gives you superior control with precision dosing. This new technology is more effective, while protecting wildlife habitat from nuisance weeds.
